

## Sewer System Reminder

Wipes, paper towels, and other “unflushables” can create a sewer backup in your home. Only flush toilet paper (even if the label says ‘flushable’) and protect your home, sewer system and the environment.

Use a trash can instead of the toilet for all other items that do not break down like toilet paper.

If your wipes and ‘unflushables’ make it to the wastewater plant, they will cause damage to the pumps. This adds additional operational costs and increased rates.
